

### ABSTRACT

To provide a dishwasher for which the washing water distribution pipe provided with the washing nozzles and the rinsing water distribution pipe provided with the rinsing nozzles can be easily installed and removed from the washing chamber.

In the dishwasher 1, a washing water distribution pipe 21 on which washing nozzles 12, 14 are installed is arranged within a washing chamber 3, and is connected removably to a first connecting pipe 31 that communicates with the outlet side of a washing pump 19. In the same way, a rinsing water distribution pipe 27 on which rinsing nozzles 13, 15 are installed is arranged within the washing chamber 3, and is connected removably to a second connecting pipe 33 that communicates with the outlet side of a rinsing pump 24. These connections are made within a washing water tank 17 in the bottom of the washing chamber 3, therefore the washing water distribution pipe 21 and the rinsing water distribution pipe 27 can be easily installed and removed from the washing chamber. Moreover, the washing water distribution pipe 21 and the rinsing water distribution pipe 27 are unitized, so handling is extremely easy.
